Product Range

HoReCa

Necta is the cornerstone brand of N&W, the foremost group in the Vending market at world level and with a predominant position in the European panorama. The company sells its products and offers technical assistance directly in 10 nations and operates in more than 80 countries through a network of distributors and specialised agents.

N&W coherently pursues its mission in designing, producing and marketing automatic vending machines for coffee, tea, hot chocolate, snacks, fresh products as well as canned and bottled drinks, without neglecting its expansion into fast-moving market segments such as Ho.Re.Ca. and OCS. Continuous innovation is part of the Group's DNA: activity is very intense in the research and the design of new products as well as the development of new technologies destined to optimise the performances and to guarantee the quality of the products.

The strongest point of the company is the vastness of its range which offers an enormous choice of products and associated services. All the machines and solutions in the Necta range have been specially designed to satisfy every specific need for location and use, from small offices to coffee lounges, bars and restaurants, up to installations for intense use. Excellent performance, excellent quality-price ratio, innovative design, cutting-edge technology, flexible use and superior level of assistance: these are the winning cards for a company with great plans for the future.

N&W believes that sustainable development is one of the greatest challenges facing the world and has undertaken to balance economic interests and the safeguard of nature. In this respect, the acquisition of ISO 9001 Quality Certification and ISO 14001 Environmental Certification testify the company's commitment also on the ecological front, thanks to an accurate program of economic growth in full respect of the environment.

N&W not only is close to its customers with ideas and products but also with pre- and post- sales assistance that cannot be equalled elsewhere in this sector. Professional commercial support, an assistance and training plan, ad hoc financial solutions and an efficient spare parts service, together these form the complete "package" integrated by N&W with the highest levels of serious professionalism and reliability.

■ GIGA

GIGA is the innovative package of applications developed by N&W to optimise the management and configuration of the company's range of vending machines.

- **Giga Light**, the standard package including functions for management and storage of setup files, DA software and statistics in EVA-DTS format;
- **Giga mobile**, the version developed for palmtops based on the Windows CE operating system;
- **Giga Premium**, the package providing more demanding experts with advanced tools for configuring the new range of vending machines (starting from Canto, Samba and Diesis);
- **LabeLab**, software for personalising and printing labels indicating selections, prices and instructions for the new range of machines.

■ UP-KEY

It consists of a special key, managed by the FLASH UP application, for the quick and economical updating of the machines' software.

In fact, all that is necessary is to connect the Up-Key to a dedicated connector, found on the CPU board, to transfer the software into the machine itself without having to use a laptop or palmtop. It is also possible to clone an existing configuration.

■ BITX TELEMETRY SYSTEM

BITX is a remote control system for any vending machine installed in location. The operator can communicate with the machine through a serial interface based on EVA DTS standard.

■ MIZIP

The new range of MiZip cashless readers is now available. A natural evolution of the Zip system, this new product offered by N&W has inherited the high levels of reliability, security and simplicity in programming and use.

N&W has decided to double its offer for more flexibility and in fact, the new range includes two models:

· **MiZIP**, for customers requiring a compact system (integrating CPU and reading head in a single device), simple to install and extremely reliable;

· **MiZip plus**, designed for those wishing to use advanced software functions (bonus, collection of points and customer fidelity, promotions and happy hours), choosing to adopt a full optional system for all configurations of the payment system.

The MiZIP readers are available in "key" and "key+card" versions; both can be supplied with either Executive or MDB protocol.
